

# BIOS-SHIELD:

## A Secure PC with Cloud-enabled management

### WHAT'S BIOS-SHIELD?

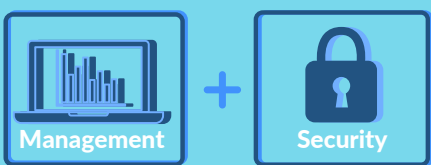

It's an extension of the BIOS that acts as a protective layer between the hardware and the OS

### HOW'S IT DIFFERENT FROM MY CURRENT PC?

Through virtualization we uncouple the tie between the OS and your data - allowing secure, remote access

### OKAY, BUT HOW DOES "VIRTUALIZATION" HELP ME?

**Management** by allowing remote access to your end points and **Security** by blocking threats and protecting data.

### TELL ME MORE ABOUT THE CLOUD

Once a user registers on BIOS-SHIELD.com, they can gain access to the cloud management features which include remote access, shutdown, reboot, or disable the device.

### IS BIOS-SHIELD A PC OR A SERVICE?

It's both! In addition to the cloud-enabled features, BIOS-SHIELD PC's are enabled with Data Encryption, Time Machine Restoration, USB Device Control/Encryption and a Secure Browser.

### SOUNDS GOOD! HOW DO I GET STARTED?
